

## Alleviate concerns of exposure by saving a trip to the patient service center

Scarlet, a division of BioReference Laboratories, makes it easier for your patients to get their specimen collected for laboratory testing. With the Scarlet mobile phlebotomy program, your patient's specimen can be collected at their home or place of employment. Just send the laboratory order with a few keystrokes and Scarlet will take it from there.

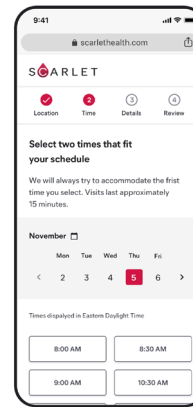

### How it works for you:

- Order laboratory testing electronically through InsightDx, a secure, HIPAA-compliant Healthcare Provider Portal
- Scarlet schedules directly with your patients via text or email
- Health professionals come to your patient's home or place of employment to collect specimens
- A Scarlet health professional delivers your patient's specimen to BioReference Laboratories for testing
- View your patient's results by logging into InsightDx

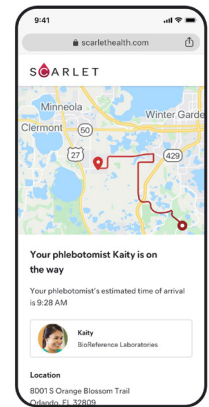

### The Patient Experience:

### What Scarlet Offers:

- Convenience for patients and healthcare providers
- Alleviate exposure risk to infectious conditions (i.e. COVID-19 or the influenza virus)
- Easy access to patient test results
- Quick turnaround
- A solution for patients with limited access to healthcare facilities (i.e. long-term care centers, nursing homes, etc.)

### Types of Specimens Collected

Depending upon the location, Scarlet health professionals can collect most specimen types that would traditionally be collected at patient service center locations.
